

DISTRIBUTED GENERATION

This tariff is applicable to customers with Distributed Generation (DG), such as solar, wind turbine or other auxiliary generation interconnected with Hudson Light & Power Department (HLPD) electric system, with capacity rating of less than 100kW AC. Such DG system must be owned by the HLPD customer.

RATE

HLPD does not provide for net metering of distributed generation. Pricing for the delivered electricity output of the DG system will be at HLPD's Power Adjustment Charge (PAC), as it is set from time to time.

For any billing period that HLPD calculates an amount owed to a DG customer a credit will be posted to customer's account. HLPD will carry forward, from billing period to billing period, any remaining credit balance. Balances exceeding \$100 will be processed for payment on an annual basis in March each year for customers in good standing.

INSTALLATION REQUIREMENTS

DG system shall be installed and tested in compliance with all applicable standards and the latest revision of HLPD equipment and installation requirements. It must be inspected and approved by HLPD.

TERMS AND CONDITIONS

The installation of the DG system and inverter introduces potential liability for HLPD. Therefore, HLPD requires and the customer agrees that:

- In the event that a failure of the anti-islanding feature causes damage to property and/or injury to any person(s), the customer will bear sole responsibility for any claims or damages.
- The customer will also be solely responsible for any adverse impact to other customers as a result of a failure of his/her inverter to perform within the harmonic limits of UL 1741. The customer will be solely responsible for the costs to correct such impacts.
- The customer will hold HLPD harmless for any damages that might occur to his/her DG/Inverter system or his/her property as a result of the interconnection to the HLPD's system.

HLPD's Standard Terms and Conditions in effect from time to time, where applicable and not inconsistent with any specific provisions hereof, are a part of this tariff.
